

## Sailboat Bow Stops

Once you have loaded the boat onto the trailer properly (end boat flush with back of trailer), follow these directions:

For a 1 piece bow stop/winch stand, attach so the roller is just above the boat's bow-eye.

For a 2 piece bow stop/winch stand, attach the roller where it hits the boat. Then attach the winch stand assembly so the winch strap is level with or slightly higher than to where the winch strap attaches.
